

TRI-LOGIC ALX, V-CUT SS, ULTRACARE

Performance you can trust

CUSTOMER

FOCUS Label manufacture clothing label machines and manufacture all parts for their machines, which are built in house, in their designated machine shop.

APPLICATION DETAILS AND ISSUES

Issues included:

- ▶ Bacterial infections in their fluids causing poor odours and skin irritation for operators.
- ▶ Poor sump life – poor nature of the product and the lack of service meant sump life rarely past 3 months.
- ▶ Standard cutting fluid used in the grinding section instead of using a designated grinding fluid, causing issues with poor fluid life and leaving too much oily residue on the parts after grinding, resulting in an additional wash stage.

RECOMMENDED PRODUCTS AND SERVICES

ROCOL proposed the use of TRI-Logic ALX for machining their aluminium parts. They needed a product to provide excellent surface finish and provide outstanding performance when threading and tapping. Rocol also proposed V-Cut SS for the grinding section. FOCUS Label's usage of fluid on the grinding section would be a lot less than on the CNC machines so Rocol put forward V-cut, Value Engineered cutting fluid, as it is available in a smaller 55l drum that was much more suitable for the amount required.

BENEFITS / COST SAVINGS

It has been 12 months since FOCUS Label and Rocol started working together and the results are apparent. All machines are looking very clean and machining very well. Most notably, the grinding section is running a lot better as there is no need to clean the oily residue off the parts any more after grinding, V-cut SS is proving much cleaner and more effective at grinding their parts. FOCUS Label can rest assured that they will receive a regular and consistent service call from Rocol and the problems of the past have been cleared up, all thanks to using the right products and a little education and support
