

FOODLUBE® UNIVERSAL

Performance you can trust

CUSTOMER

A market leader in the design development and manufacture of can making machinery.

APPLICATION REQUIREMENTS

The company required a multi-purpose NSF-H1 registered grease to lubricate the critical areas of a beading machine. The company had been experiencing costly problems when parts of the machines failed their customers.

BENEFITS

Since switching to FOODLUBE Universal, the company has registered a 61% decrease in the amount of power used by this machine. This equates to a cost saving of approximately £2.25 per day. In-house electricians monitored the performance closely and reported that further increases in efficiency were made following the initial measurement. They also found that the grease was still lubricious following component removal whereas prior to the change the grease had solidified and had become destructive. Reports also show a 50% reduction in grease consumption.

Power costs £2.25 x 365 days = £821.25

Grease cost 50% less = £2000.00

Total saving £2821.25

FOODLUBE PROTECT SPRAY

High performance, multi-purpose food grade bearing grease for maximum life.

- ▶ ISO 21469 certified
- ▶ Significantly extends bearing life
- ▶ Superior load & wear properties
- ▶ Highly resistant to water wash out
- ▶ Excellent corrosion protection
- ▶ Also available as an aerosol
- ▶ Temperature range -50°C to +160°C
- ▶ NSF H1 registered
