

ROCOL[®]

FOODLUBE[®] Animal Feed – Pellet Mill

Performance you can trust

Customer:

Major animal feed manufacturer in the Middle East.

Lubricating of Ring-Die Manually:

Benefits of using Rocol[®] FOODLUBE PREMIER 1:

- At least 4 times less quantity of grease needed (45g of Rocol FOODLUBE Premier 1 grease per hour instead of 200g per hour of competitor grease (Matrix) as recommended by pellet mill OEM).
- Using Rocol[®] FOODLUBE Premier 1 guarantees food safety (NSF H1, ISO21469, Kosher and Halal registered).
- Using competitor grease with a quantity of 200g per hour means there will be approximately 150g per hour surplus grease passing into the feed pellets. This excess grease will change the texture and the mixture of pellets and potentially mean that this grease contamination is greater than any allowable limits (causing product recalls).
- Bearings last at least 15 months against a previous maximum life of 6 months.
